Predictions Market using dAPIs

A basic predictions market for DeFi and crypto price forecast using API3's dAPIs

Features:
- Ability to make markets. Eg. - If BTC price will hit 30k EOM
- Ability to buy shares for a side on the market.
- Ability to settle the position and redeem your shares after the outcome.
- ETH will be used to buy and sell shares for each side.
- For settling on an outcome, dAPIs will be used to check the price for the selected asset after the set epoch.

Need to build out:
- A contract that facilitates the ability to make markets, buy shares for a side and settle positions after an epoch.
- An AMM that will help in maintaining and adding liquidity.
- ERC20 tokens for shares on both sides of the market. Will be deployed each time when someone makes a new market.
